

Aris Series
Directional Optics Strips

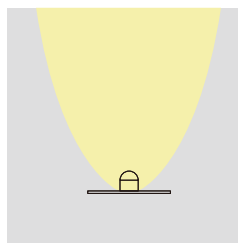

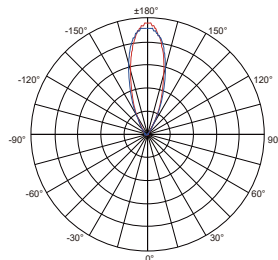

Aris

Optimal small size directional flexible strip

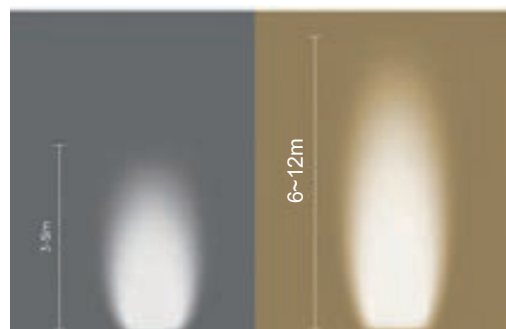

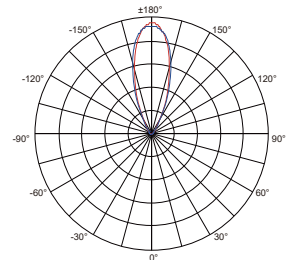

40°/50° directional flexible light strip with a projection distance of up to 12 meters
Ultra-narrow 5~10mm wide directional flexible light strip;
Single-end power supply supports up to 10 meters with <15% brightness difference between ends.

40°

50°

Traditional strip

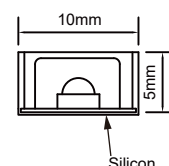

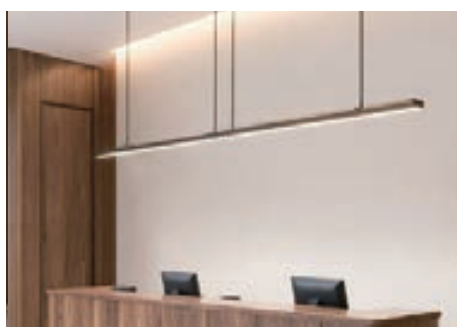

Aris Flex strip

40°/ 50° all-in-one LED

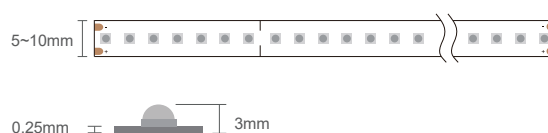

Beam angle is 40°/ 50° without extra lens or other optics.
Higher light intensity and uniformity with a high illuminance and penetrating power of up to 10 - 12 meters.

Traditional strip with an extra lens irradiates only 3-5m

Small Size

5~10mm wide IP20 flex strip with firm integrated lens, after silicon extrusion, is only 5x10mm, up to 30W/m. The extra lens on many other strips on the market is subject to easy peeling off.

Traditional lens light strips

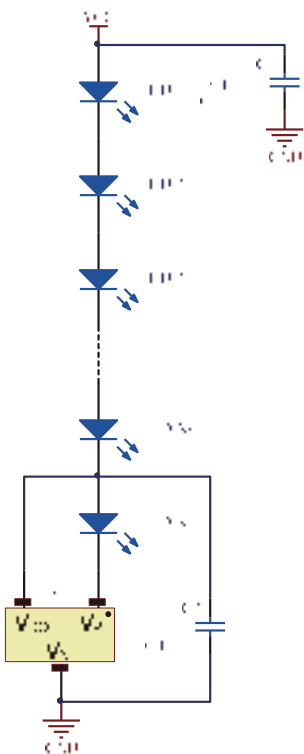

Have large size, are prone to falling off and have low penetration power.

Constant current IC design

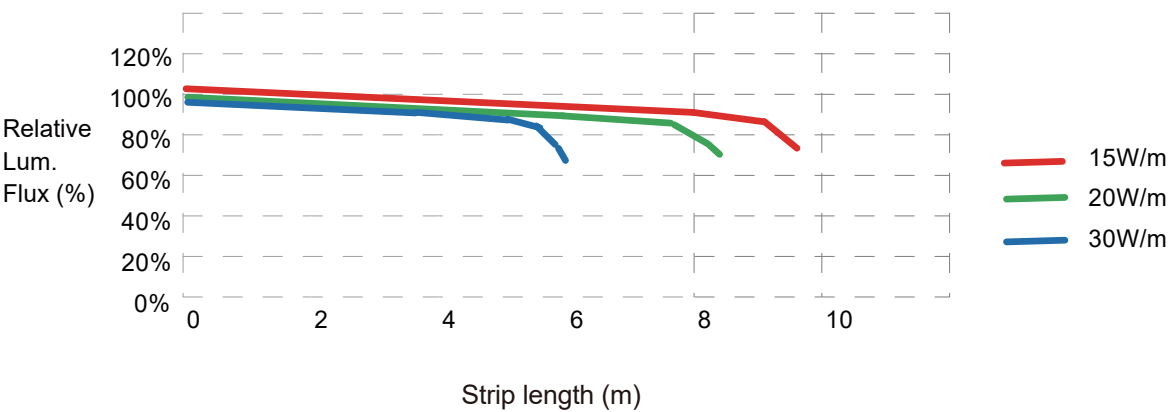

Using a constant current IC design ensures that the current in the strip circuit remains constant. Providing a stable current can ensure that the light strip emits light with a constant brightness, and at the same time prevent the light strip from being damaged due to excessive current, thereby maximizing the service life of the light strip.

Application circuit diagram

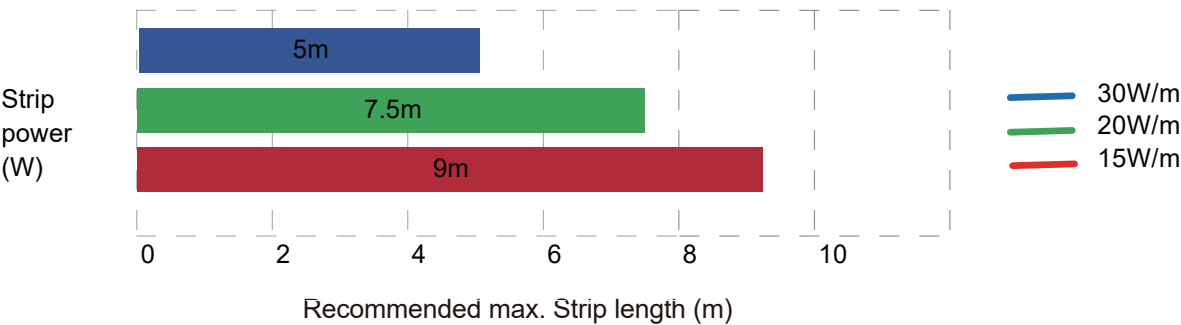

STABILITY OF LUMINOUS FLUX

Ta = 25°C, input voltage of 24VDC.
The graphic below shows the expected typical change in luminous flux in %, while having one sided power supply, between the first and last step of the named LED Strips length.

To ensure the highest possible quality of the installation, we recommend to limit the maximum LED strip length, based on the individual strip power, to the maximum length, showed in the graph. Hereby it will be ensured, that the typical maximum reduction will remain below 15% on the displayed LED strip length.

Directional light

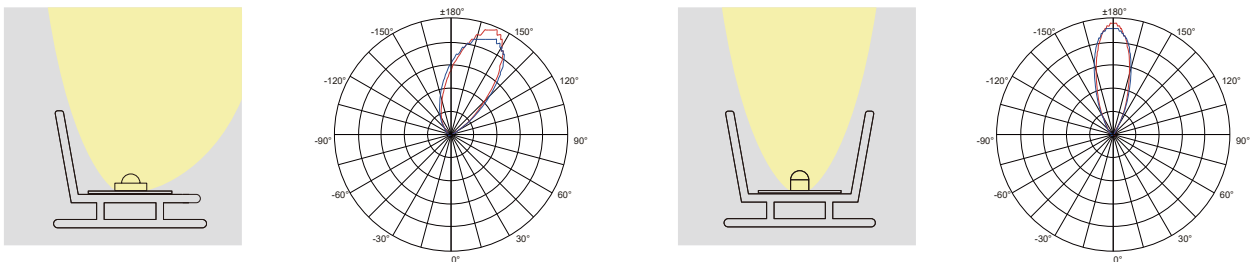

XLine Module can be infinitely long

Users can firstly install the aluminum profiles, then the high-quality flex strips, and finally add the PC cover. The length can be achieved according to the user's requirements.

Combined with high-quality power supplies, the XLine Module can be extended to a maximum of 20m per power supply and is the best module for long-distance linear lights.

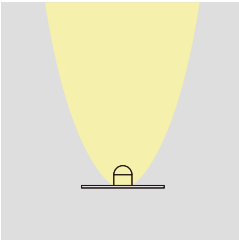

XLine Module has both indoor and outdoor types. The maximum single strip indoors can reach 30W/m, 6000lm/m.

The XLine module can use Aris as the light source.

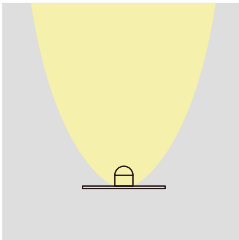

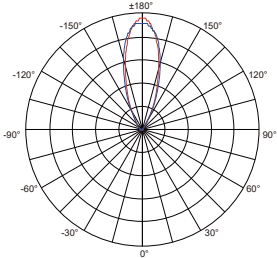

Aris flex strips can be integrated with proper profiles and optical shades into linear light module (XLine Module).

Neptune Aris

Neptune Aris IP65 waterproof silicone tape light, with a size of only 5x10mm, achieves a small angle of light emission, making Neptune tape light more flexible to be applied in various outdoor projects and lamps.

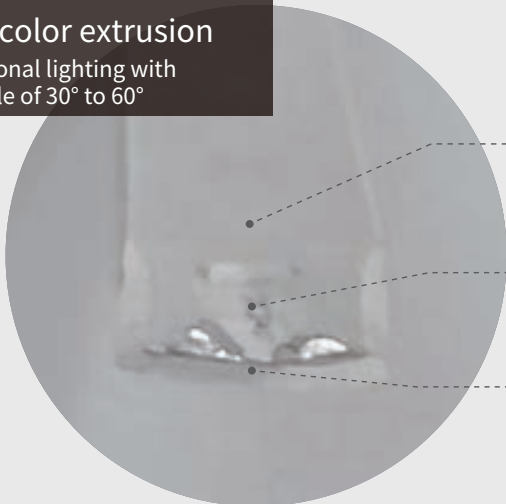

It has broken through the bottleneck of large size of small-angle silicone tape light.

Neptune Aris IP65 tape light has excellent performance, with a power of 15~30W per meter and a luminous efficacy greater than 100lm/W. Its high cost performance advantage is particularly suitable for use in waterproof indoor and outdoor projects and lamps.

Two-color extrusion

Directional lighting with
an angle of 30° to 60°

· Utilizing high-quality UV-resistant silicone material, it is IP65 waterproof and UV-resistant, suitable for outdoor applications.

· Using LED with a lens, a small-sized optical light strip with an angle of 30 to 60 degrees is designed.

· Compact design, enabling more flexible usage

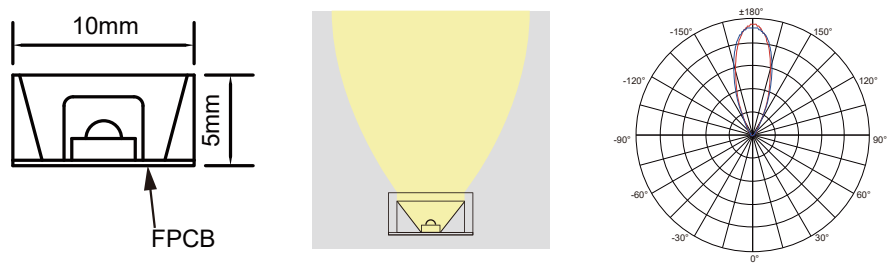

Traditional IP65: General lighting, with decorative lighting as the main focus

Neptune Aris IP65: Directional Lighting: Angle 30° to 60°, suitable for main lighting, wall washing lighting, and spot lighting

Aris Xline Module

XLine Module has a unified standard installation interface and can be directly used on different luminaires or arranged separately in the required places

Installed as an indoor hanging luminaire or
Industrial wall-washing luminaire or
Outdoor wall-washing luminaire.
There are two installation methods: insertion and fixed.
On ceiling it is used alone.
For wall-washing it is used alone.

Directional light

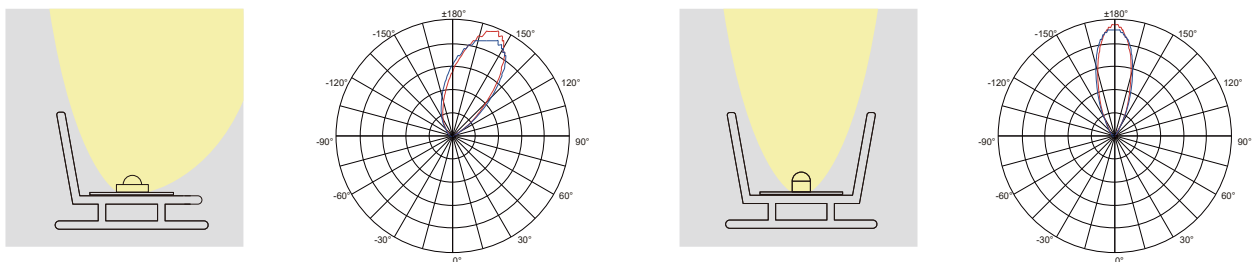

XLine Module can be infinitely long

Users can firstly install the aluminum profiles, then the high-quality flex strips, and finally add the PC cover. The length can be achieved according to the user's requirements.

Combined with high-quality power supplies, the XLine Module can be extended to a maximum of 20m per power supply and is the best module for long-distance linear lights.

XLine Module has both indoor and outdoor types. The maximum single strip indoors can reach 30W/m, 6000lm/m.

The XLine module can use Aris as the light source.

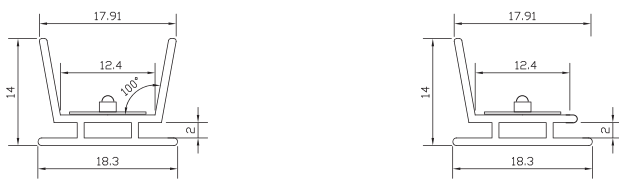

Aris flex strips can be integrated with proper profiles and optical shades into linear light module (XLine Module).

Aris XLine Module

- 1, Built-in lens, directional 40° / 50° or other special light emission angles;
- 2, With high illumination and penetration 5-12 meters;

Industrial Lighting

Light for industry and trade.

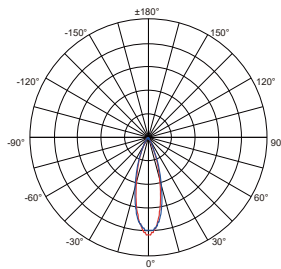

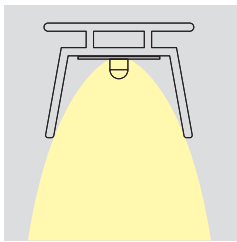

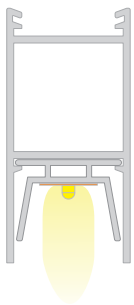

Higher illuminance levels for productivity, concentration and well-being.

Lighting in the industrial and trade sector is crucial for safety, efficiency and productivity.

Well-planned lighting ensures clear visibility and reduces the risk of accidents and errors.

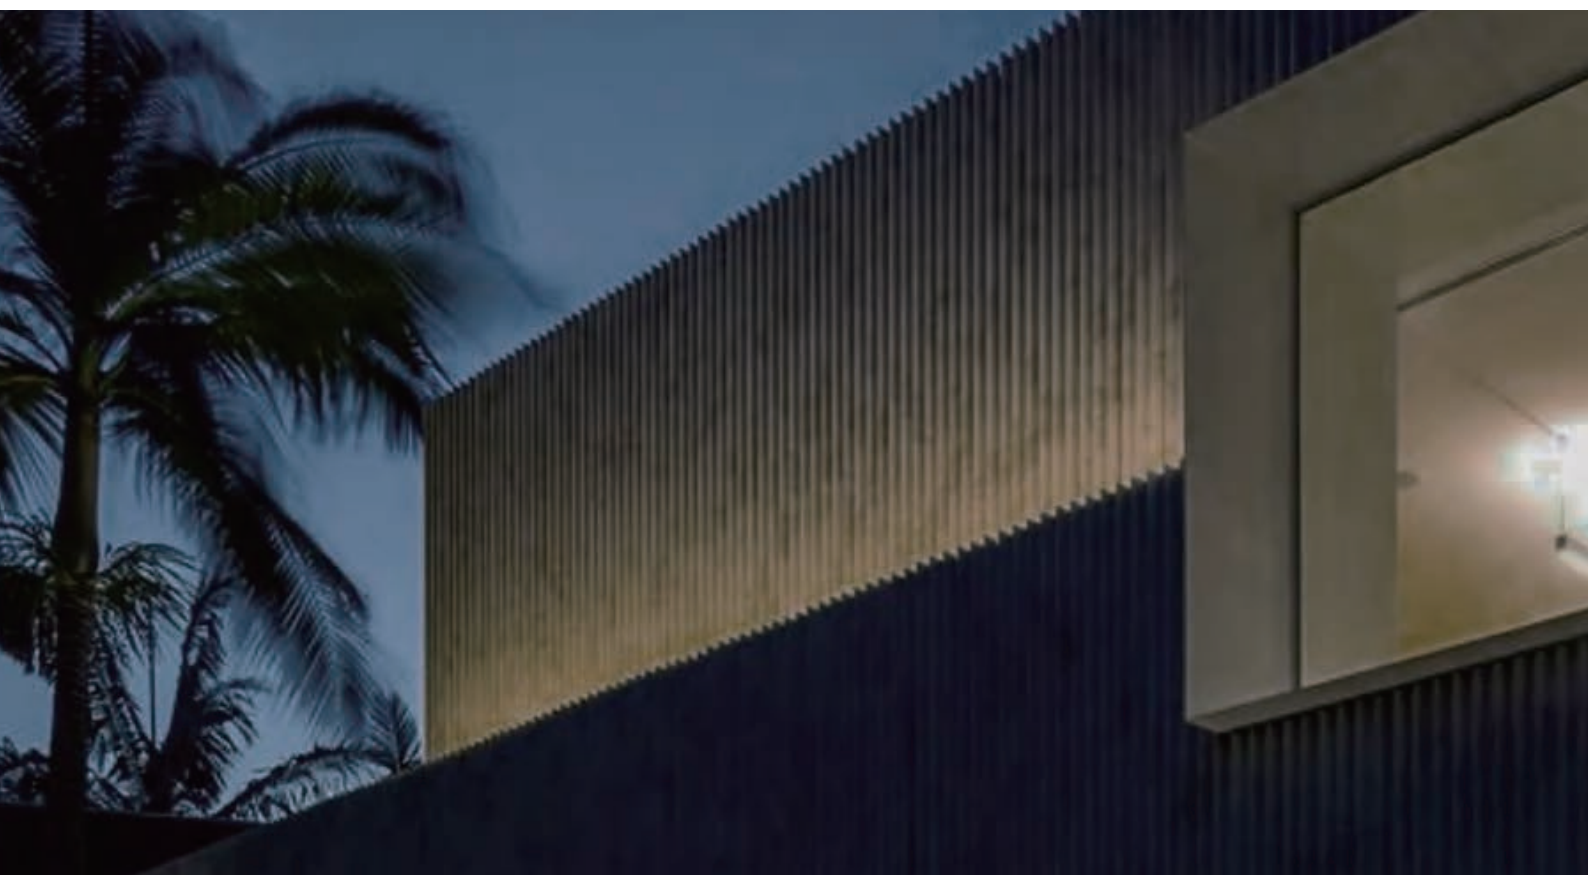

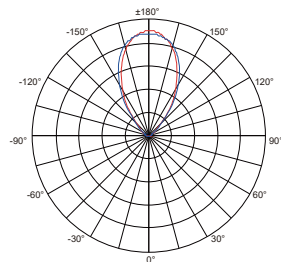

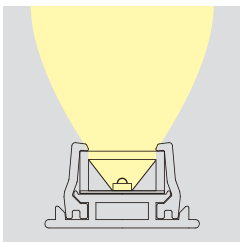

Modern LED technologies offer high luminous efficacy, energy efficiency and a long service life.

Flexible lighting solutions adapt to different work processes and improve the quality of work, employee comfort and reduce operating costs.

Outdoor Lighting

Outdoor wall-washing lighting is a fusion of science and art - it uses precise light control to restore the true texture of buildings and conveys the emotional value of space through dynamic color language. Under the "people-oriented" urban lighting concept, excellent wall-washing design not only illuminates buildings but also awakens people's perception and love for the night environment, making every wall a "canvas of light and shadow" that tells the story of the city.
